Foreword

This manual describes roadside assistance operations and important safety related warnings and cautions for this vehicle. This vehicle is equipped with a high-voltage battery pack. Failure to follow recommended practices during emergency responses will cause death or serious personal injury. Please read this manual in advance in order to understand the features of this vehicle and to help you deal with roadside assistance operations involving this vehicle. Follow the procedures in order to help assure a safe and successful roadside assistance operation.

This manual is periodically updated. If you are not viewing this manual on the Infiniti web site, we urge you to go to www.infinitiusa.com or www.infiniti-techinfo.com to make sure you have the most recent version of this manual.

INFINITI EMERGENCY CONTACT INFORMATION

- Infiniti Consumer Affairs 1-800-662-6200 (US) or 1-800-361-4792 (Canada)
- Hours of operation are 8am-5pm (Monday-Friday) Eastern, Central and Pacific time zones

IMPORTANT INFORMATION ABOUT THIS MANUAL

You may see various symbols in this manual. They have the following meanings:

⚠️ DANGER

This symbol is used to inform you of an operation which will result in death or serious personal injury if instructions are not followed.

Example: Touching high-voltage components without using the appropriate protective equipment will result in electrocution. PPE must always be worn when touching or working on high-voltage components.

⚠️ WARNING

This symbol is used to inform you of an operation which may cause death or serious personal injury if instructions are not followed.

⚠️ CAUTION

This symbol is used to inform you of an operation which may cause personal injury or component damage if instructions are not followed.

Please note that there may be differences between this manual and the vehicle specification due to specification changes.

1. About the QX60 HYBRID

This hybrid electric vehicle (HEV) uses two types of batteries. One is a 12-volt battery that is the same as the battery in vehicles powered by internal combustion engines. The 12-volt battery is located in the front of the vehicle on the left side of the engine compartment. The other is the high-voltage battery for the traction motor which propels the vehicle. The high-voltage battery is located under the third row seating with service plug access through the cargo area storage bin.

When the high-voltage battery level is low, engine output is used to generate power from the traction motor and charge the high-voltage battery. Additionally, the vehicle system can recharge the high-voltage battery by converting driving force into electricity while the vehicle is decelerating or being driven downhill. This is called regenerative charging.
1-1 QX60 HYBRID IDENTIFICATION

1-1.1 Exterior and Engine Compartment
1-1.2 Interior

Interior components referenced in this manual are as follows:

A. Assist charge gauge  B. READY indicator (green)  C. Energy flow display *1
D. Energy flow display *1  E. Liftgate switch  F. Hood release handle
G. START/STOP switch and ON indicator lamp (orange)

*1: This screen may not be displayed due to customer settings. Only one of these screens will display energy flow depending on vehicle optional equipment.
1-2 Vehicle Identification Number (VIN) Layout

In exterior appearance the QX60 HYBRID is nearly identical to the conventional Infiniti QX60 series vehicles. The vehicle identification number can be located as follows:

Example VIN: 5N1 CLOMN2HC055570

The QX60 HYBRID is identified by the 4th alphanumeric character: C

C = QX60 HYBRID

1. VIN plate (visible through windshield) 2. Vehicle certification label (lower center pillar)
### 1-3 Warning and Indicator Lamp Information

1. Hybrid System Warning Lamp (Orange)
2. READY Indicator (Green)
3. Master Warning Lamp (Orange or Red)
4. Hybrid System Overheated Stop Vehicle Warning (Vehicle Information Display)

<table>

<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>READY Indicator (Green)</td>
<td><img src="image1" alt="Icon" /></td>
<td>This lamp is on when the high-voltage system is powered up and the vehicle is ready to drive.</td>
</tr>
<tr>
<td>Master Warning Lamp (Orange or Red)</td>
<td><img src="image2" alt="Icon" /></td>
<td>This lamp is on when another warning lamp or message is displayed in the instrument cluster.</td>
</tr>
</tbody>
</table>
| Hybrid System Warning Lamp *1 (Orange) | ![Icon](image3) | This lamp is on or blinking when:  
  - Malfunction has occurred in the high-voltage system and/or  
  - High-voltage leak to vehicle chassis and/or  
  - Emergency shut-off system has been activated. The shut-off system activates in the following conditions:  
    - Front and side collisions in which the air bags are deployed.  
    - Certain rear collisions.  
    - Certain high-voltage system malfunctions. |

*1: When this lamp is ON, the READY Indicator will turn OFF.
2. Basic High-Voltage Information

2-1 Battery Information

The QX60 HYBRID utilizes two batteries in order to supply both high and low voltage.

2-1.1 12-Volt Battery

- The QX60 HYBRID contains a conventional lead-acid 12-volt battery.
- The 12-volt battery is located in the front of the vehicle on the left side of the engine compartment.
- The 12-volt battery is charged by the high-voltage battery through the DC/DC converter.

2-1.2 High-Voltage Battery

- The QX60 HYBRID contains a high-voltage battery.
- The high-voltage battery is mounted in the cargo area under the 3rd row seating, enclosed in a metal case and concealed by trim cover.
- The high-voltage battery stores approximately 144 volts DC.
- A vent hose is provided to exhaust gasses outside the vehicle if necessary.

- Air vents (A) are located on the cargo area trim panels for battery cooling.

The high-voltage battery supplies power to the following:

- High-voltage harnesses
- DC/DC converter
- Traction motor inverter
- Traction motor
NOTE:
Components with white number in black background are high-voltage components.

3. Roadside Assistance Response Steps

**WARNING**

- NEVER assume the QX60 HYBRID is shut OFF simply because it is quiet.
- If the vehicle is damaged and you are not sure about the condition of the electric vehicle system, contact first responders immediately. If the vehicle is damaged, the high-voltage system should be shut down by first responders while following the procedures in the First Responders Guide and while wearing appropriate Personal Protective Equipment (PPE).
- If the READY indicator is ON the high-voltage system is active.
- If possible, be sure to check the READY indicator on the instrument cluster and verify that the READY indicator is OFF and the high-voltage system is stopped.
- Some of the under hood parts get hot and may cause serious burns. Use caution when working on or around these parts.

</tr>
</tbody>
</table>
3-1.1 Personal Protective Equipment (PPE) Protective Wear Control
Perform an inspection of the Personal Protective Equipment (PPE) items before beginning work. Do not use any damaged PPE items.

3-1.2 Daily Inspection
This inspection is performed before and after use. The worker who will be using the items should perform the inspection and check for deterioration and damage.

- Insulated rubber gloves should be inspected for scratches, holes and tears. (Visual check and air leakage test)
- Insulated safety boots should be inspected for holes, damage, nails, metal pieces, wear or other problems on the soles. (Visual check)
- Insulated rubber sheet should be inspected for tears. (Visual check)

3-1.3 Insulated Tools
When performing work at locations where high-voltage is applied (such as terminals), use insulated tools meeting 1,000V/300A specifications.

3-2 Indications the High-Voltage System is ON
If the READY indicator is ON, the high-voltage system is active.

Before disconnecting the 12-volt battery terminal, if necessary, lower the windows, unlock the doors, and open the rear hatch as required. Once 12-volt battery is disconnected, power controls will not operate.
3-3 Vehicle Immobilization and Stabilization

If possible, immobilize the vehicle by turning the 12-volt system OFF and stabilize it with a wheel chock(s). Stabilize the vehicle with wooden blocks or by removing air from the tires.

**WARNING**

- To avoid electrical shock, do not put wooden blocks or wheel chock(s) under the high-voltage components and harnesses as shown following.
3-4 Turning OFF the Ignition Switch

1. Check the READY indicator status. If it is ON, the high-voltage system is active.
2. Press the ignition switch once to turn OFF the high-voltage system. Then verify whether the READY indicator is OFF.

3. If possible, keep the Infiniti Intelligent Key at least 5 meters (16 feet) away from the vehicle to prevent accidentally turning ON the hybrid system while the roadside assistance is in progress.

3-5 Water Submersion

⚠️ DANGER

Damage level of submerged vehicle may not be apparent. Handling a submerged vehicle without appropriate Personal Protective Equipment (PPE) will result in serious injury or death from electrical shock.

⚠️ WARNING

- ⚠️ The ignition switch of the submerged vehicle must be turned OFF first, if possible. Then the vehicle must be completely out of the water and drained to avoid electrical shock.
- ⚠️ If the vehicle is in the water, to avoid electrical shock NEVER touch the high-voltage components, harnesses or service plug. PPE must always be worn when touching or working on high-voltage components.

Only first responders wearing appropriate Personal Protective Equipment (PPE) should shut down the vehicle. After shut down, standard towing/recovery procedures can be used. Refer to 4-3 Towing (RAG–24).
3-6 Vehicle Fire

⚠️ WARNING

- Always utilize appropriate full Personal Protective Equipment (PPE) and self-contained breathing apparatus during fire fighting operations. Smoke from a QX60 HYBRID vehicle fire is similar to smoke from a conventional vehicle fire.
- In the case of extinguishing a fire with water, large amounts of water from a fire hydrant (if possible) must be used. DO NOT extinguish fire with a small amount of water.

⚠️ CAUTION

In the event of a small fire, a Type ABC fire extinguisher may be used for an electrical fire caused by wiring harnesses, electrical components, etc. or oil fire.

In case of vehicle fire, contact fire department immediately and extinguish the fire if possible. If you must walk away from the vehicle, notify an appropriate responder or a rescue person of the fact that the vehicle is a hybrid vehicle that contains a high-voltage system and warn all others.
The high-voltage battery contains electrolyte solution. To avoid exposure to electrolyte solution and serious personal injury, always wear appropriate solvent resistant Personal Protective Equipment (PPE) and read the following precautions:

- Electrolyte solution is a skin irritant.
- Electrolyte solution is an eye irritant – If contact with eyes, rinse with plenty of water and see a doctor immediately.
- If electrolyte leak occurs, wear appropriate solvent resistant PPE and use a dry cloth to clean up the spilled electrolyte. Be sure to adequately ventilate the area.
- Electrolyte solution is highly flammable.
- Electrolyte liquid or fumes that have come into contact with water vapors in the air will create an oxidized substance. This substance may irritate skin and eyes. In these cases, rinse with plenty of water and see a doctor immediately.
- Electrolyte fumes (when inhaled) can cause respiratory irritation and acute intoxication. Move to fresh air and wash mouth with water. See a doctor immediately.

In cases of battery case breach or electrolyte leakage, contact the fire department immediately. If you must walk away from the vehicle, notify an appropriate responder of the fact that the vehicle is a hybrid vehicle and contains a high-voltage system and warn all others.

High-Voltage Battery Electrolyte Solution Characteristics:
- Clear in color
- Sweet odor
- Similar viscosity to water
- Since the high-voltage battery is made up of many small sealed battery modules, electrolyte solution leakage should be minimal.

**NOTE:**

Other fluids in the vehicle (such as engine oil, washer fluid, brake fluid, coolant, etc.) are the same as those in a conventional vehicle.
4. Roadside Assistance

4-1 Jump Starting

To start the hybrid system with a booster battery, the instructions and precautions below must be followed.

**WARNING**

If done incorrectly, jump starting can lead to a 12-volt battery explosion, resulting in severe personal injury or death. It could also damage your vehicle.

Jump starting provides power to the 12-volt system to allow the electrical systems to operate. The electrical systems must be operating to allow the high-voltage battery to be charged. Jump starting does not charge the high-voltage battery.

**Discharged 12-volt battery may cause the following issues:**

- The instrument cluster cannot be displayed while the ignition switch is turned ON. (The hybrid system cannot start.)
- Headlamps, horn, etc. are weak.

**WARNING**

- To avoid electrical shock, the high-voltage battery CANNOT be jump started.
- Explosive hydrogen gas is always present in the vicinity of the 12-volt battery. Keep all sparks and flames away from the 12-volt battery. Make sure the vent tube is mounted.
- Do not allow battery fluid to come into contact with eyes, skin, clothing or painted surfaces. Battery fluid is a corrosive sulfuric acid solution that can cause severe burns. If the fluid comes into contact with anything, immediately flush the contacted area with water.
- The booster battery must be rated at 12-volts. Use of an improperly rated battery can damage the vehicle.
- Whenever working on or near a 12-volt battery, always wear suitable eye protectors (for example, goggles or industrial safety spectacles) and remove rings, metal bands, or any other jewelry. Do not lean over the 12-volt battery when jump starting.
- Do not attempt to jump start a frozen battery. It could explode and cause serious injury.
- QX60 HYBRID is equipped with an automatic cooling fan. It could come on at any time. Keep hands and other objects away from it.
- Always follow the jump starting instructions below. Failure to do so could result in damage to the charging system and cause personal injury.
4-1.1 Jump Starting Procedures

NOTE:
Jumper cable connections under the hood of the QX60 HYBRID are not connected directly to a battery. They are connected to chassis ground and a fuse box terminal. Refer to the following instructions and the above illustration.

1. Locate the fuse box behind the engine air cleaner.
2. Push the tab in and lift up (A) to remove the fuse box cover and expose the remote positive battery terminal (B).
3. If the booster battery is in another vehicle, position the two vehicles to bring their batteries near each other.

**DO NOT allow the two vehicles to touch.**
4. Apply the parking brake. Move the selector lever the P (Park). Switch off all unnecessary electrical systems (lights, heater, air conditioner, etc.).
5. Remove vent caps on the battery (if so equipped) of the vehicle with battery for booster. Cover the battery with an old cloth (F) to reduce explosion hazard.
6. Connect jumper cables in the sequence as illustrated (B→C→D→E).

**CAUTION**
- Always connect positive (+) to positive (+) and negative (-) to body ground (for example, as illustrated), not to the 12-volt battery.
- Make sure the jumper cables do not touch moving parts in the engine compartment and that the cable clamps do not contact any other metal.

7. Start the engine of the booster vehicle and let it run for a few minutes.
8. Hold down the brake pedal and press the START button. The vehicle instruments and gauges will light up, and the green READY light will come ON.

**CAUTION**
If the green READY light does not come on, press the START button to turn the Hybrid System OFF. Carefully disconnect the negative cable then the positive cable. It is recommended the vehicle is taken to an INFINITI retailer for repair.
9. After the green READY light in the meter display comes ON, carefully disconnect the negative cable and then the positive cable.
10. Replace the vent caps (if so equipped). Be sure to dispose of the cloth used to cover the vent holes as it may be contaminated with corrosive acid.
11. Reinstall the fuse box cover.

NOTE:

If it is not possible to turn the hybrid system ON by following this procedure, it is recommended you contact an INFINITI retailer immediately.

4-1.2 Shift Selector Lever Lock Release
If the 12-volt battery is low or discharged, the selector lever cannot be moved from the Park (P) position. If a booster battery is not available, the selector lever lock can be manually released. To manually release the selector lever lock, perform the following procedure:

1. Push the ignition switch to the LOCK or OFF position.
2. Apply the parking brake.
3. Remove the shift lock cover using a suitable tool.
4. Push down the shift lock using a suitable tool as shown in the illustration.
5. Push the selector lever button and move the selector lever to the Neutral (N) position while holding down the shift lock.

4-2 Tools Installed in the Vehicle

The tool kit is housed inside the tool bag along with the jack located inside the cargo area under the luggage board.
4-3 Towing

4-3.2 Towing Guidelines

Infiniti strongly recommends that QX60 HYBRID be towed with the driving wheels off the ground or that the vehicle be placed on a flatbed truck.

⚠️ CAUTION ⚠️

- AWD Models: Never tow with any of the wheels on the ground, as this may cause serious and expensive damage to the powertrain.
- FWD Models: Never tow with the front wheels on the ground, as this may cause serious and expensive damage to the powertrain.
- Transport the vehicle only after turning the ignition switch OFF.
- Safety chains or cables must be attached only to the main structural members of the vehicle. Otherwise, the vehicle body will be damaged.
- Do not use the vehicle tie down points to free a vehicle stuck in sand, snow, mud, etc.
- Never tow a vehicle using the vehicle tie down.
- Always pull the recovery device straight out from the vehicle. Never pull on the vehicle at an angle.
- Pulling devices should be routed so they do not touch any part of the suspension, steering, brake, high-voltage or cooling systems.
- Pulling devices such as ropes or canvas straps are not recommended for use in vehicle towing or recovery.
Perform vehicle towing by holding up drive wheels (front or all, depending on model) or on flatbed in order to prevent secondary damage from voltage generated by the motor. In addition, turn the ignition switch OFF when towing the vehicle. Refer to the following illustration:

**AWD Models**

**FWD Models**
4-3.3 Use of Vehicle Equipped Hooks for Recovery Operations

If the vehicle is stuck in sand, snow, mud, etc., use a tow strap or other device designed specifically for vehicle recovery. Always follow the manufacturer’s instructions for the recovery device.

**WARNING**

To avoid vehicle damage, serious personal injury or death when recovering a stuck vehicle:

- Tow chains or cables must be attached only to main structural members of the vehicle.
- Do not use the vehicle tie-downs to tow or free a stuck vehicle.
- Only use devices specifically designed for vehicle recovery and follow the manufacturer’s instructions.
- Always pull the recovery device straight out from the front of the vehicle. Never pull at an angle.
- Route recovery devices so they do not touch any part of the vehicle except the attachment point.

Rear Tie Down Hook:

- Do not use the rear tie down hook for towing or vehicle recovery.

- The rear tie down hook is designed to secure the vehicle during transport only, as illustrated.
Always follow these instructions when jacking up the vehicle and changing a tire:

- Never change a tire when the vehicle is on a slope, ice or slippery areas. Jack must be on level ground.
- Make sure the parking brake is securely applied and shift selector is in P (Park) position.
- Never get under the vehicle while it is supported only by the jack. If it is necessary to work under the vehicle, support it with safety stands.
- Use the correct jack-up points. Never use any other part of the vehicle for jack support.
- Never jack up the vehicle more than necessary.
- Never use blocks on or under the jack.
- Do not start or run the engine while vehicle is on the jack. It may cause the vehicle to move. This is especially true for vehicles with limited slip differentials.
- Do not allow passengers to stay in the vehicle while it is on the jack.
- Never run the engine with a wheel(s) off the ground. It may cause the vehicle to move.
- Be sure to block the wheel diagonally opposite the wheel being removed as the vehicle may move and result in personal injury.

Failure to follow these instructions can result in serious personal injury or death and/or vehicle damage.

1. Open the liftgate and lift the luggage board in the cargo area using the handle (A).

2. Remove the jack and tool kit cover by lifting up using the handles.
3. Remove the tool kit.
   a. To release the tool kit, release the straps (A).

4. Remove the jack (B), winch socket (C), extension (D) and wheel nut wrench (E).

5. The lowering mechanism for the spare tire is located on the passenger side of the cargo area. Remove the cover to access the spare tire winch.

6. Place the spare tire winch socket onto the lowering mechanism nut.

7. To lower the spare tire, insert the wheel nut wrench (E) to the extension (D) and insert the T-shaped end to the winch socket (C) and rotate counterclockwise.

8. After removing the spare tire from under the vehicle, be sure to crank the cable up to stow it.

9. Loosen each wheel nut one or two turns by turning it counterclockwise with the wheel nut wrench. **Do not remove the wheel nuts until the tire is off the ground.**
10. Place the jack directly under the jack-up point as illustrated so the top of the jack contacts the vehicle at the jack-up point. Align the jack head between the two notches in the front or the rear as shown. Also fit the groove of the jack head between the notches as shown. The jack should be used on level firm ground.

11. To lift the vehicle, securely hold the jack lever and rod with both hands as shown. Carefully raise the vehicle until the tire clears the ground. Remove the wheel nuts, and then remove the tire.

12. Install new or repaired tire and hand-tighten the wheel nuts with the wheel nut wrench in an alternating pattern.

**WARNING**

Always follow these instructions when changing a tire:

- Incorrect wheel nuts or improperly tightened wheel nuts can cause the wheel to become loose or come off. This could cause an accident.
- Do not use oil or grease on the wheel studs or nuts. This could cause the nuts to become loose.

Failure to follow these instructions can result in serious personal injury or death and/or vehicle damage.

13. Securely torque the wheel nuts in an alternating pattern to 83 ft-lb (113 Nm).
14. Lower the vehicle and remove the jack and securely store the flat tire, tools and jacking equipment in the vehicle.

**WARNING**

Always follow these instructions when using the jacking equipment or after changing a tire:

- Always make sure that the spare tire and jacking equipment are properly secured after use. Such items can become dangerous projectiles in an accident or sudden stop.
- When re-installing the spare tire under the vehicle after use, be sure to secure it with the tire stem facing down toward the ground. If the spare tire is improperly secured with the tire stem facing up towards the bottom of the vehicle, there is an increased risk of separating from the vehicle in the event of crash which may pose a hazard in traffic or risk of injury to others.

Failure to follow these instructions can result in serious personal injury or death and/or vehicle damage.

**NOTE:**

To help prevent squeaks and rattles, check that the tools are reinstalled and properly secured in the stored place after use.
5. Storing the Vehicle

**WARNING**

The service plug must be removed to shut down the high-voltage system for storage. Do not store a vehicle inside a structure. Keep the vehicle away from other vehicles if the high-voltage battery is severely damaged. There is possibility of delayed fire from a severely damaged high-voltage battery.

5-1 Danger Sign Example

If QX60 HYBRID needs to be stored or left unattended, the high-voltage system must be shut down by removing the service plug (refer to 5-2 Removing The Service Plug (RAG–33)), and a sign put on the vehicle indicating it is an electric vehicle with high-voltage dangers. For example:
DO NOT TOUCH!
IN PROGRESS.
HIGH VOLTAGE REPAIR
DANGER:
HIGH VOLTAGE REPAIR IN PROGRESS.
DO NOT TOUCH!

Person in charge:______________

Copy this page and put it after folding on the roof of the vehicle in service.
5-2 Removing The Service Plug

**DANGER**
- **Do not remove the service plug without always wearing appropriate Personal Protective Equipment (PPE) to help protect the responder from serious injury or death by electrical shock.**
- **Immediately cover the service plug socket with insulated tape. The high-voltage battery retains high-voltage power even when the service plug is removed. To avoid electric shock, NEVER touch the terminals inside the socket.**

**WARNING**
- **To avoid unintended reinstallation and risk of electrical shock and severe personal injury or death, the service plug should be securely stored away from the vehicle while the vehicle is in storage.**

1. If possible, check the READY indicator status in the instrument cluster. If it is on, the high-voltage system is active.
2. Place the shift selector in the Park (P) position.

3. Push the ignition switch once to turn OFF the high-voltage system. Then verify whether the READY indicator is off.
   If the READY indicator does not turn off, continue to step 4.
4. If possible, keep the Infiniti Intelligent Key at least 5 meters (16 feet) away from the vehicle (except to open the liftgate as noted below).

5. Open the liftgate using any of the following:
   a. liftgate switch on the lower LH side of the instrument panel.
   b. liftgate button on the Infiniti Intelligent Key [press for longer than one (1) second].
   c. liftgate opener switch (A) (located above license plate)*
d. If the liftgate cannot be opened with the instrument panel switch, liftgate opener switch, or key fob due to a discharged battery, follow these steps:
  - Remove the cover (A) on the inside of the liftgate.
  - Move the lever (B) as illustrated to open liftgate.

* You must have the Infiniti Intelligent Key within approximately 1 meter (3 feet) range of liftgate opener switch to use the liftgate opener switch function.

6. Open luggage board in the cargo area using the handle (A).

7. Open service plug access cover.
8. Remove the service plug (A) by pulling the locking lever (B), then pressing the locking tab (C) and rotating the handle (D) fully outward. Using the handle, pull the service plug (E) completely out of its socket.

9. **Wait approximately ten (10) minutes for complete discharge** of the high-voltage capacitor after the service plug has been removed.

10. Pull release handle (1) and pull up release lever (2) to open hood.
11. Remove traction motor inverter cover (1).

12. Disconnect negative (-) battery cable and cover it with insulated tape.

13. The vehicle is now ready for storage.
